

Job Title: C#/Javascript Developer

Our band of merry misfits

Our band of merry misfits bonded over a shared trait - we have the ethos and heart of a non-profit with the efficiency and financial incentives of a for-profit. And so we were anointed with the title of a Benefit Corporation, a company whose purpose is to create material and positive impact on society as a for-profit entity.

What we do (actually what we do, not fluffy PR stuff)

CoopMetrics provides technology for non-profits, cooperatives, and small businesses to:

1. Aggregate and understand their financial performance at a deep level.
2. Benchmark themselves against peers on a variety of apples-to-apples financial attributes. This creates specific, actionable areas for these companies to invest in to improve their business.
3. Collect and blend mission-related data with the financial data. Our customers have non-financially-quantifiable missions to positively impact the world. We help them blend this "impact" data with their financial data for a holistic view on how they are doing.

How we do it (the nuts and bolts)

We are architecting for continuous deployment in AWS. Entire environments can be setup with a single script and can be torn down and re-created very easily. We are building 100% RESTful services with a focus on good system grammar for discoverability and to reduce complexity.

What's exciting about the next 12 months?

We are positioned to grow, grow, and grow! We need to make the backend scale as much as we need the frontend to pop. So there are plenty of juicy engineering problems to solve.

This team is 100% remote, really?

Really! We push Skype and GoToMeeting to the max =)

Your website is old school

Yeah, we know. We have a stunning website in the works.

We are looking for:

- Strong C# and .NET experience
- Experience with any of the major Javascript frameworks. Also, Highcharts is a plus!
- Hands-on experience with data and data systems (some of the following): SQL/TSQL, visualization, ETL processing, data QC.
- A well rounded, curious, and competent developer who puts teamwork ahead of ego and cares deeply about creating quality products
- Along with building new stuff, willingness to roll up the sleeves and share the burden of maintenance and bug fixing with all of the other developers

How to Apply

Please send your resume to [REDACTED], use subject "C#/JavaScript Developer" and briefly, let us know:

1. What technologies or paradigms in data systems are you most excited about right now?
2. What technology or topic is at the top of your list of things to learn? Does not have to be related to data.
